TRADITION

The history of the company dates back to 1951, when it started its activity as a cooperative manufacturing agricultural machinery. In the '70s, it built its current manufacturing base and gained recognition in the local and foreign markets for its own product range using the latest technology available.

INNOVATION

In 2011, the company modernized its site with its current management, giving new impulse to the metal construction business. It is currently operating on a 2.5 hectare base with approximately 10,000 m² of modern production space.

Innomechanika Ltd currently employs more than 50 people and hundreds of others through its suppliers. In addition to the physical labour, the company also has engineering support to develop customers' ideas already at the design level.

ELECTROSTATIC POWDER COATING

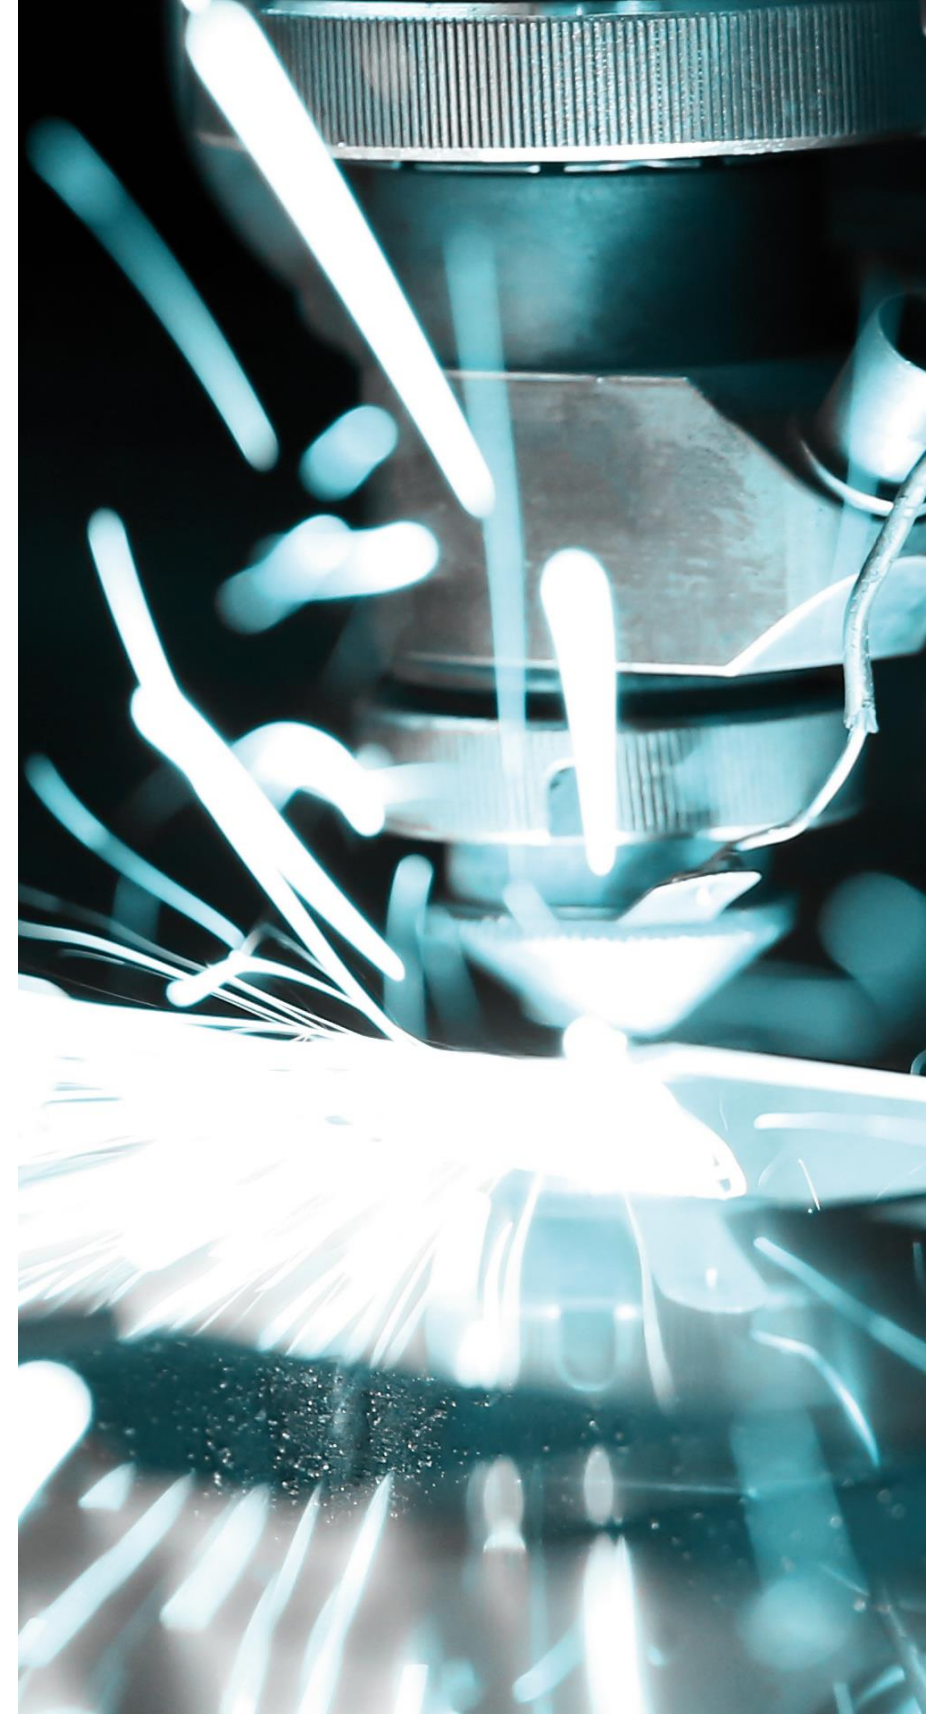

Powder coating is the most advanced environmentally friendly surface treatment method for corrosion protection. Suitable for all metal surfaces, it is considered to be the most wanted among modern coating technologies in the metal, mechanical, food and healthcare industries. Provides excellent corrosion protection with aesthetic quality and an endless range of colours.

Our plant applies state-of-the-art innovative processes. Our equipment offers a variety of pretreatment solutions, tailored to our customers' needs. From zirconium silane to phosphating or nano and multi-steel technology, we offer our clients countless solutions. Our goal is to produce uncompromising quality products for our customers.

INNOVATIVE PRODUCTION TECHNOLOGIES

Our company is committed to continuous improvement and innovation. We are convinced that the key to competitiveness is that we are always able to renew and expand our activities in a way that fully meets the needs of our partners.

Efficient, high-quality serial production is inconceivable without highly automated machines. Laser cutting of sheet metals, high pressure sheet forming as well as 3-dimensional laser welding and cutting are also available at our company.

TRADITIONAL METAL CONSTRUCTION

We keep our traditions and consider our employees as ambassadors of the company. Their expertise and passion form the basis of our success and the most important strength of our company.

In our new hall, opened in early 2019, our products are manufactured in state-of-the-art welding and grinding cabins with high purity requirements.

In addition to a variety of conventional welding processes, our plant has steel profile and sheet forming equipment, rolling machines, threading machines, riveted nut and PEM inserting equipment to meet the complete needs of our customers.

INDUSTRY 4.0

In 2018, we were among the first in Hungary to introduce an integrated enterprise resource planning and intelligent production management system in line with INDUSTRY 4.0. In addition to SAP Business One, our company has an integrated BX Core production management system and BX POEM visual production planning program.

Our warehouse has storage location identification, barcode product tracking, electronic reporting of production per workstation, PDC terminals, and objective data integration from production machines. The system provides real-time data for both our own production and our customers.

Partners

Cooperating closely with our business partners, we are working together to utilize the opportunities of the market.

What we see in our business partners is not competition, but the opportunity to work together so that we can all develop equally and achieve our goals together.

Strategy

Sustainable development is an essential part of our strategy. One important element of this is the environmentally friendly management of natural resources and that premium products should be produced with premium solutions from an ecological point of view as well.

Motto

Excellence in every aspect of our business - serving our partners at a high level, providing good value for money with maximum customer satisfaction.

WE ARE ALWAYS OPENED TOWARDS NEW PROJECTS, BE IT SMALL OR BIG.

If you feel we can help the realization of your new project, please do not hesitate to contact us.
